

- Create an API to display **msg in mobile apps** (lottery open huda msg display hunu paryo , lottery parda msg display hunu paryo and lottery ko result aauda msg display hunu paryo and if kunai user le offer price jato ko lottery kine cha bhane msg jaanu paryo) msg must be dynamic
- **Provide lottery details** jun user jun lottery kine cha tiyo lottery details ushko mobile maa hernu paryo with payment status, lottery type, lottery number, start date, end date and result date. New lottery kine ko jahile pani top maa hernu paryo.
- Create **Dashboard** to display total purchase lottery Amount of each lottery type 4D , 5D and 6D (Daily total lottery, weekly, after 15 day, 1 month, 3 month , 6 month , yearly and total).
- Display the purchase lottery according to their first digit. Suppose if the lottery starts from 0 (zer0) then display it in the **0(zero) column**. Admin can select lottery winner from this menu .
- After selecting the winner according to their first digit . display all the select winner list in **Winner Menu** and in this menu section admin can select winners like 1st , 2d , 3rd , consolation and special.
- Admin wants to provide some **offers** if the user can purchase the target amount of the lottery. and display this msg in mobile apps soo user must be the offer details.
- **Mobile users** must know their total **purpose amount** so users can compare their total purchase amount with the admin provided offer. please create api for it.
- Admin wants to **set offers price** in the admin panel and if any of the users can purchase targeted amount or offer amount then auto display the msg in each admin panel and in mobile users as msg.
